

RESPONSE UNDER 37 C.F.R. § 1.116
EXPEDITED PROCEDURE
TC/AU. 3761

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A web comprising superabsorbent material and fibers wherein:
at least some of the fibers are coated onto the superabsorbent material prior to formation of the web,
the web is formed while the superabsorbent material contains at least about 0.5 grams of
a liquid that it has absorbed, and
some of the liquid absorbed in the superabsorbent material is removed after formation of the web,
wherein the web comprises a superabsorbent material content of at least about 60% by dry weight and the web experiences a web loss of less than about 9% when subjected to the Shakeout Test as set forth in the specification.
2. (Original) An absorbent article comprising the web of Claim 1.
3. (Original) The web according to Claim 1, wherein removing the liquid comprises causing or allowing evaporation of the liquid.
4. (Original) The web according to Claim 3, wherein the formed web further has been exposed to conditions that accelerate the evaporation of the liquid.
5. (Original) The web according to Claim 4, wherein the conditions that accelerate the evaporation of the liquid comprise an elevated temperature.
6. (Original) The web according to Claim 1, wherein the liquid is selected from solutions and mixtures that comprise water.
7. (Original) The web according to Claim 1, wherein the liquid comprises distilled water.
8. (Canceled)

RESPONSE UNDER 37 C.F.R. § 1.116
EXPEDITED PROCEDURE
TC/AU. 3761

9. (Canceled)
10. (Original) The web according to Claim 1, wherein the fibers comprise wood pulp fibers.
11. (Original) The web according to Claim 1, wherein the fibers have been coated onto the superabsorbent material by combining the fibers and superabsorbent material in the presence of air agitation.
12. (Original) The web according to Claim 1, wherein the web is formed by depositing the coated superabsorbent material onto a surface.
13. (Original) The web according to Claim 1, wherein the web comprises one or more fibers, particles, materials or combinations thereof in addition to the fiber and the superabsorbent material.
14. (Original) The web according to Claim 1, wherein the superabsorbent material comprises particles.
15. (Previously Presented) A web comprising superabsorbent material and fibers wherein:
 at least some of the fibers are coated onto the superabsorbent material prior to formation of the web,
 the web is formed while the superabsorbent material contains a liquid that it has absorbed, and
 at least some of the liquid absorbed in the superabsorbent material is removed after formation of the web;
 wherein the superabsorbent material comprises particles; and
 wherein at least some of the particles comprise an outer layer comprising at least one type of superabsorbent material and an inner core comprising at least one other type of superabsorbent material that differs from the superabsorbent material in the outer layer.

RESPONSE UNDER 37 C.F.R. § 1.116
EXPEDITED PROCEDURE
TC/A.U. 3761

16. (Previously Presented) A web comprising superabsorbent material and fibers wherein:
- at least some of the fibers are coated onto the superabsorbent material prior to formation of the web,
 - the web is formed while the superabsorbent material contains a liquid that it has absorbed, and
 - at least some of the liquid absorbed in the superabsorbent material is removed after formation of the web;
 - wherein the superabsorbent material comprises particles; and
 - wherein at least some of the particles are comprised of SAM that exhibits a gradual trend of decrease in crosslinking proceeding from the outer surface of the particle to the center of the particle.
17. (Currently Amended) A web comprising fibers and superabsorbent material, wherein the superabsorbent material contains at least about 0.5 grams of an absorbed liquid during formation of the web and wherein the web comprises a superabsorbent material content of at least about 60% by dry weight and the web experiences a web loss of less than about 9% when subjected to [a] the Shakeout Test as set forth in the specification.
18. (Original) An absorbent article comprising the web of Claim 17.
19. (Currently Amended) The web of Claim 17, wherein the web experiences a web loss of about 5% or less when subjected to [a] the Shakeout Test.
20. (Currently Amended) A web comprising fibers and superabsorbent material, wherein the superabsorbent material contains at least about 0.5 grams of an absorbed liquid during formation of the web and wherein the web comprises a superabsorbent material content of at least about 70% by dry weight and the web experiences a web loss of less than about 15% when subjected to [a] the Shakeout Test as set forth in the specification.
21. (Original) An absorbent article comprising the web of Claim 20.
22. (Currently Amended) The web of Claim 20, wherein the web experiences a web loss of about 10% or less when subjected to [a] the Shakeout Test.

RESPONSE UNDER 37 C.F.R. § 1.116
EXPEDITED PROCEDURE
TC/A.U. 3761

23. (Currently Amended) The web of Claim 20, wherein the web experiences a web loss of about 5% or less when subjected to [a] the Shakeout Test.
24. (Currently Amended) A web comprising fibers and superabsorbent material, wherein the superabsorbent material contains at least about 0.5 grams of an absorbed liquid during formation of the web and wherein the web comprises a superabsorbent material content of at least about 80% by dry weight and the web experiences a web loss of less than about 17% when subjected to [a] the Shakeout Test as set forth in the specification.
25. (Original) An absorbent article comprising the web of Claim 24.
26. (Currently Amended) The web of Claim 24, wherein the web experiences a web loss of about 10% or less when subjected to [a] the Shakeout Test.
27. (Currently Amended) The web of Claim 24, wherein the web experiences a web loss of about 5% or less when subjected to [a] the Shakeout Test.
28. (Currently Amended) A web comprising fibers and superabsorbent material, wherein the superabsorbent material contains at least about 0.5 grams of an absorbed liquid during formation of the web and wherein the web comprises a superabsorbent material content of at least about 90% by dry weight and the web experiences a web loss of less than about 58% when subjected to [a] the Shakeout Test as set forth in the specification.
29. (Original) An absorbent article comprising the web of Claim 28.
30. (Currently Amended) The web of Claim 28, wherein the web experiences a web loss of about 50% or less when subjected to [a] the Shakeout Test.
31. (Currently Amended) The web of Claim 28, wherein the web experiences a web loss of about 35% or less when subjected to [a] the Shakeout Test.
32. (Currently Amended) The web of Claim 28, wherein the web experiences a web loss of about 20% or less when subjected to [a] the Shakeout Test.
33. (Currently Amended) The web of Claim 28, wherein the web experiences a web loss of about 10% or less when subjected to [a] the Shakeout Test.

RESPONSE UNDER 37 C.F.R. § 1.116
EXPEDITED PROCEDURE
TC/AU. 3761

34. (Currently Amended) The web of Claim 28, wherein the web experiences a web loss of about 5% or less when subjected to [a] the Shakeout Test.
35. (Currently Amended) A web comprising fibers and superabsorbent material wherein the web loss experienced by the web when subjected to [a] the Shakeout Test as set forth in the specification is not a monotone nondecreasing function of the concentration of superabsorbent material in the web.
36. (Original) An absorbent article comprising the web of Claim 35.
37. (Currently Amended) A web comprising fibers and superabsorbent material wherein the web loss experienced by the web when subjected to [a] the Shakeout Test as set forth in the specification is a monotone nonincreasing function of the concentration of superabsorbent material in the web.
38. (Original) An absorbent article comprising the web of Claim 37.
39. (Previously Presented) A web comprising fibers and at least one superabsorbent material at least partially coated with the fibers, wherein:
- individual bodies of the superabsorbent material have bonds with each other, with fibers that are coated upon other bodies of the superabsorbent material, or with a combination thereof, and
- the superabsorbent material comprises a composition that forms such bonds upon removal of a liquid contained in the superabsorbent material;
- wherein the bonds can form upon removal from the superabsorbent material of at least about 0.5 grams of the liquid per gram of superabsorbent material.
40. (Original) An absorbent article comprising the web of Claim 39.

RESPONSE UNDER 37 C.F.R. § 1.116
EXPEDITED PROCEDURE
TC/AU. 3761

41. (Original) The web of Claim 39, wherein the removal of the liquid contained in the superabsorbent material comprises evaporation of the liquid.
42. (Original) The web according to Claim 41, wherein the evaporation comprises exposing the web to conditions that accelerate the evaporation of the liquid.
43. (Original) The web according to Claim 42, wherein the conditions that accelerate the evaporation of the liquid comprise an elevated temperature.
44. (Original) The web according to Claim 39, wherein the liquid is selected from solutions and mixtures that comprise water.
45. (Original) The web according to Claim 39, wherein the liquid comprises distilled water.
47. (Canceled)
48. (Original) The web according to Claim 39, wherein the fibers comprise wood pulp fibers.
49. (Original) The web according to Claim 39, wherein the fibers have been coated onto the superabsorbent material by combining the fibers and superabsorbent material in the presence of air agitation.
50. (Original) The web according to Claim 39, wherein the web is formed by depositing the coated superabsorbent material onto a surface.
51. (Original) The web according to Claim 39, wherein the web comprises one or more fibers, particles, materials or combinations thereof in addition to the fiber and the superabsorbent material.
52. (Original) The web according to Claim 39, wherein the superabsorbent material comprises particles.

RESPONSE UNDER 37 C.F.R. § 1.116
EXPEDITED PROCEDURE
TC/AU. 3761

53. (Previously Presented) A web comprising fibers and at least one superabsorbent material at least partially coated with the fibers, wherein:

individual bodies of the superabsorbent materials have bonds with each other, with fibers that are coated upon other bodies of the superabsorbent material, or with a combination thereof, and

the superabsorbent material comprises a composition that forms such bonds upon removal of a liquid contained in the superabsorbent material;

wherein the superabsorbent material comprises particles, and

wherein at least some of the particles comprise an outer layer comprising at least one type of superabsorbent material and an inner core comprising at least one other type of superabsorbent material that differs from the superabsorbent material in the outer layer.

54. (Previously Presented) A web comprising fibers and at least one superabsorbent material at least partially coated with the fibers, wherein:

individual bodies of the superabsorbent materials have bonds with each other, with fibers that are coated upon other bodies of the superabsorbent material, or with a combination thereof, and

the superabsorbent material comprises a composition that forms such bonds upon removal of a liquid contained in the superabsorbent material;

wherein the superabsorbent material comprises particles, and

wherein at least some of the particles are comprised of SAM that exhibits a gradual trend of decrease in crosslinking proceeding from the outer surface of the particle to the center of the particle.

55. (New) A web comprising fibers and superabsorbent material, wherein the web comprises a superabsorbent material content of at least about 90% by dry weight and the web experiences a web loss of less than about 5% when subjected to the Shakeout Test as set forth in the specification.

56. (New) An absorbent article comprising the web of Claim 55.

57. (New) The web according to Claim 55, wherein the liquid is selected from solutions and mixtures that comprise water.

58. (New) The web according to Claim 55, wherein the liquid comprises distilled water.

RESPONSE UNDER 37 C.F.R. § 1.116
EXPEDITED PROCEDURE
TC/AU. 3761

59. (New) The web according to Claim 55, wherein the fibers comprise wood pulp fibers.
60. (New) The web according to Claim 55, wherein the fibers have been coated onto the superabsorbent material by combining the fibers and superabsorbent material in the presence of air agitation.
61. (New) The web according to Claim 55, wherein the web is formed by depositing the coated superabsorbent material onto a surface.
62. (New) The web according to Claim 55, wherein the web comprises one or more fibers, particles, materials or combinations thereof in addition to the fiber and the superabsorbent material.
63. (New) The web according to Claim 55, wherein the superabsorbent material comprises particles.
